

Important Updates: June 5, 2017

If you are experiencing weather widget displaying "Updating", this is due to the fact that World Weather Online has discontinued their free API starting May 31st, 2017. Only paid API keys will continue to be supported by our widget.

If you choose to continue using the service, you can purchase your API key from World Weather Online. Once you receive your API Key, you can enter the key in the field within the Weather Widget and select Key-Type "Premium"

The image shows a configuration panel for a weather widget. On the left is a green square icon with a white cloud and sun. The panel contains the following settings:

- Weather**
- Duration: sec(s)
- Preference setting**
- cities: ▾
- scale: ▾
- color:
- foreColor:
- key:
- key-type: ▾ ⓘ

Key-type affects the API used to update the weather info.
