## 2. INTRODUCTION

Avenview HBT2-C6POH-USB-SET HDMI and Audio over Single CAT5e/6/7 Transmitter and Receiver set can send uncompressed audio/video along with controls, IP and USB data over a single run of CAT5e/6/7 cable up to 100m. It has the added benefit of control through built-in RS-232 and IR ports. With LAN ports allowing network connection and external digital and analog audio capability that gives users the convenience of additional audio connection. HBT2-C6POH-USB-SET also allows the connection of any USB host, enabling a USB connection to up to 2 USB ports, giving the Receiver the ability to act like a USB hub. The 48V PoE design can power the Receiver (Rx) from the Transmitter (Tx), eliminating the need for a separate power supply for the Receiver. Also, the ultra-thin mechanical designs allow flexibility mounting position saving more space.

### FEATURES:

- Supports HDBaseT 2.0 specification over a single CAT6/7 cable up to
- 100m/328ft and CAT5e cable up to 90m/295ft;
- Receiver features 2 USB 2.0 ports to control any USB peripheral device;
- HDMI (with 3D & 4K2K@60 -YUV420 support), HDCP 2.2 and DVI compatible;
- HDBaseT 5Play™ convergence: High-Definition (HD) Video and Audio, 100BaseT Ethernet, PoE and Control (Bidirectional IR/RS-232 pass-through);

## NOTICE

1. All HDMI over CAT5 transmission distances are measured using Belden CAT6A (625MHz), 4-Pair, U/UTP-Unshielded, Riser-CMR, Premise Horizontal Cable, 23 AWG Solid Bare Copper Conductors, Polyolefin Insulation, Patented Double-H spline, Ripcord, PVC Jacket using Quantum 980 signal HDMI Video Generator Module Video Pattern Testing.
2. The transmission length is largely affected by the type of category cables, also the type of HDMI sources, and the type of HDMI display. The testing result shows solid UTP cables (usually in the form of 300m or 1000ft bulk cable) can transmit a lot longer signals than stranded UTP cables (usually in the form of patch cords). Shielded STP connectors are better suit than unshielded UTP connectors. A solid UTP CAT5e cable shows longer transmission length than stranded STP CAT6 cable. For long extension users, solid cables are your only choice.
3. EIA/TIA-568-B termination (T568B) for category cables is recommended for better performance.
4. To reduce the interference among the unshielded twisted pairs of wires in category cable, you can use shielded STP cables with shielded connector to improve EMI problems, which occurs in long transmission.
5. Because the quality of the category cables has the major effects in how long transmission distance will be made and how good is the received display, the actual transmission length is subject to your category cables. For resolution greater than 1080i or 1280x1024, a solid CAT6 cable is the only viable choice.
